

Safety Pads For Your Trampoline

By David Jones

Trampoline Frame pads are available in various shapes and sizes as per the users demand. They are all covered by some sort of PVC covering to protect from UV rays. Almost all trampolines come with safety pads. Though, over a period of time they wear out and demand replacement - so when you shop for replacement pads don't go for price alone instead look for safety features so that you and your family is protected from any harm.

Our safety pads are made of high density, closed-cell foam that will absorb shocks, not water and will resist mildew and loss of shape. Backed up by low price guarantee, you could be certain that the safety, durability and value of these pads are the industry benchmark. All of our pads exceed ASTM standards. We offer trampoline pads in all three shapes – Round, Rectangular and Octagonal.

Our frame pads cover the trampoline frame and springs with a 1-inch wide plank of thick closed cell foam which overlaps the edge of the trampoline mat. We offer a range of frame pads to suit every budget even though there is no compromise on quality. Some of the special features of our trampoline frame pads are:

Our frame pads contain the best quality highest density, shock absorbent, closed-cell foam which does not absorb water or lose shape.

As an added protection our frame pads contain anywhere between 8 to 24 sets of straps to attach to the trampoline to hold it in place while jumping and during high winds.

At Trampoline Pro Shop, we consider your family's safety as our topmost priority. Our new range of ultra pads is a "must see" addition to the existing pads portfolio. When buying a new trampoline pad, make sure that you have the exact measurements of the old one, as well as the number of grommets or tabs that are used to attach it to the frame.

Our round safety pads are compatible with JumpKing, Hedstrom, NBF, Sky Bouncer, Bazoongi, Jump Pro, Bollinger and all other trampoline brands.
